

PRESS RELEASE

June 15, 2009

Alfa Scientific Designs, Inc. Names New Director of Manufacturing and Product Development

Alfa Scientific announced today that Nam Shin will be joining the company as its Director of Manufacturing and New Product Development on June 15, 2009.

With over eighteen years of experience in the areas of clinical diagnostics, medical devices and research, and an MBA in Strategy and Marketing, and Masters and Bachelors of Science in Biochemistry, Nam brings a fresh innovative style to Alfa that will help us to drive new manufacturing initiatives and deliver new products to the marketplace as we focus on rapid growth over the next few years.

Prior to joining Alfa Scientific Designs, Nam worked for Princeton BioMeditech Corporation, located in New Jersey, and held the positions of Associate Director and Product Manager in their Product Development division from 1998 to present. While at PBM, Nam worked to produce and deliver new products to market while managing existing product lines, establishing international alliances with local marketing partners and developing strategies that maximized the growth of their existing products. Prior to 1998 held key research positions at the Hanhyo Institute of Technology (HIT) in Seoul, Korea.

Alfa is excited to have someone of Nam's experience join us to help us in achieving our vision. Over the next few months Alfa will be launching some key new products such as our new Oral-View™ Saliva Multi-Drug Test Device, and new additional Waived-Complexity drug analyte tests, as well as some other key products that are currently in development such as Strep A, Ketamine and EDDP test devices. With our ever expanding product line and new team members, Alfa is poised to be a leader in the in-vitro diagnostic industry.

Please join us in welcoming Nam aboard.
